Subject: triplex claim?

[Arthur, Lisa]

Sounds good except for line 11 "is longer as compared to ...". What do you think about "wherein the binding region of the two or more probes C is longer than the binding region of nucleic acid A binding probe B"?

1. A method for determining the presence or amount of a nucleic acid A, comprising:

(a) forming a triplex between said

nucleic acid A,

a nucleic acid A binding probe B

said nucleic acid binding probe B having a base sequence and binding region which binds to nucleic acid A and

two or more nucleic acid binding probes C,

wherein said two or more nucleic acid binding probes C comprise a base sequence different from nucleic acid A probe B,

which binds to nucleic acid A and

(wherein the binding region of the two or more probes C is longer than the binding region of nucleic acid A binding probe B)

(b) determining the presence or amount of said triplex as an indication of the presence or amount of nucleic acid A.

2. A triplex comprising

nucleic acid A,

a nucleic acid A binding probe B

said nucleic acid binding probe B having a base sequence and bind region which binds to nucleic acid A and

two or more nucleic acid binding probe C,

wherein said two or more nucleic acid binding probes C comprise a base sequence different from nucleic acid A probe B,

which binds to nucleic acid A and

~~is longer as compared to the binding region of nucleic acid binding probe B.~~ *add.*

This is what i came up with??

THANKS
